

Center Console Light Addition

Monday, August 10, 2026 1:13 PM

My center console didn't come with a light. It's dark in there at night. Even during the day sometimes! Gotta change that.

I knew I had the hole there for the light but never had a light come on so... I decided to investigate.

Popped open the center console rear facing cup holders:

Took a look in there and saw this guy, just hanging out:

Sure enough, it was the harness plugged into a BLANK SLOT. Come on Toyota... do all the work to get it there and don't finish it with the light!

Luckily I still had one light left over from my footwell lighting upgrade project. So I used that.

Plugged it in to the harness then on the holder for the trim facing it towards the small hole that looks in the glovebox:

Now there's light!
