

Clear PETG Cover License Plate LEDs with Camera Cutout

Tuesday, August 11, 2026 1:39 PM

Here's a cool little mod. I designed and printed some clear PETG covers to replace the old lenses for the license plate lights. I also designed it to house my backup camera on one side. Then, there are two LED warm lights on both covers, equally spaced apart. The wires are ran to where the factory connection is made and I spliced them into the original wiring. I know... I said I wouldn't do permanent mods like that but wanted to get this one done quicker than I had time to buy the connector pigtail and do it the cleaner way. It works great. Here's some pics
