

Added MTS Control Switch

Monday, August 10, 2026 1:11 PM

Inspiration came from this thread (<https://www.tundras.com/threads/added-mts-crawl-control-switch-to-platinum-crewmax.114701/>). It was unclear from the posts up if this would work for an SR5. Nationwide discount + free shipping from Fred Anderson Toyota? Let's buy it and try it!

Part number ordered is 84970-0C010 for the added MTS and DAC/CRAWL selector control switch. It's the only purchase needed for this mod. Total out the door shipped was \$172.77. My SR5 just came with the drive mode and tow haul modes.

You need to take off the side trim along both sides of the center shifter area. Also need to take the parking brake trim piece and combination switch piece out. Then it'll be free to lift up the entire center shifter area trim. I decided to not take off the shift knob because I've heard it's a PITA. You can work around not taking it off. First I took out the 4WD selector then gave myself room to push from that side plus the side lifted from shifter trim to get the multi selector drive mode switch out.

Here's some side by sides:

Connector pins look the same which is good. I plugged it in then went for a drive without snapping it all back together (in case I needed to switch back to my old selector again).

Got it in 4HI and pressed the MTS. Bingo! It works!

Sure enough, I see all the sections in my menu for MTS! Here's a pic of each one:

I rode around a bit in the neighborhood in each mode. I could definitely feel a different response from the truck for each mode. Don't really know how they all are supposed to perform but I'll mess around with them in time as I get into those elements. I love the way the screen backdrop looks for each unique mode! Fun stuff.

I didn't even try DAC/CRAWL as I know that won't work for mine. If you have an

SR5 and are on the fence, you should do it!
