

Remote Wireless Door Buzzer Disable

Monday, August 10, 2026 12:59 PM

I just did a 5min fix for the 8 constant beeps that the truck sounds when you close the door and the keys are outside of the truck. It was coming from the remote wireless door lock buzzer. I looked on some factory service pages I had downloaded when I bought the 2 day TIS and then found a thread on it already. Between those 2, it was an easy job of locating the buzzer and unplugging it. I wasn't able to adjust the volume all the way down in Carista to get it to work so I just unplugged it. No alarms or anything yet so we'll see...

Here is my post on it and this thread covers the rest:

I looked up under the driver fender liner

I found the little box, unplugged it, tried to close the door while truck was on and keys in my pocket outside the truck and didn't hear anymore beeps! I just taped up the connector and plug end just to try and keep some water from getting in there.
