

Spidertrax Wheel spacers

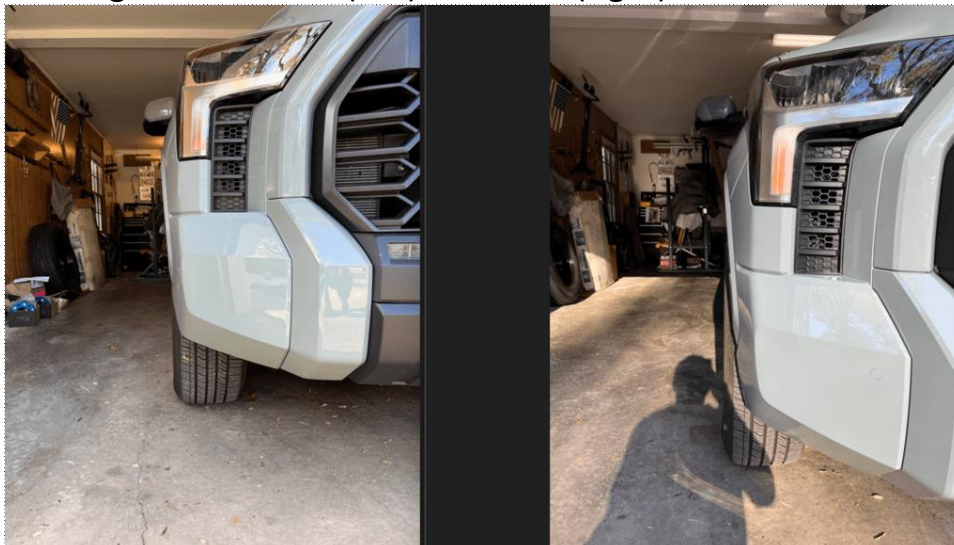

Monday, August 10, 2026 1:01 PM

I got these from someone here on the forum. They are the Spidertrax WHS034 Blue 1" Spacers that are made for our truck. I followed the instructions for install and they went on great! I'm liking the new stance. I've driven a couple miles on them so far and drive quality is the same as before, which is what I expected.

Driver side before (left) and after (right):

Passenger side before (left) and after (right):

Keep in mind, I still have the factory Yokohama Geolander tires that came with the truck on here from factory. I plan on changing that up when these wear out. I think it gives it a nice, modest poke without slinging too much up on the side of the truck.
